

Greening MENA as a Security Game Changer

Imagine:

From Waziristan to the Atlas, from Anatolia to Somalia, you see green strings of pearls, consisting of trees and crops.

The MENA population itself turned parts of the deserts, grain of sand by grain of sand into fertile land using a diversity of low-tech and mid-tech methods.

They left their dependency of oil and created a new perspective as the granary of the world, creating jobs, food and water supplies.

Doing so, they address large scale problems like terrorism, amounts of refugees, loss of biodiversity and lack of large scale carbon sinks.
